

**Topic- DT/ PSHCE: Project over the week.**

Design your own invention that could be used to help the environment.

Explain why you have created this invention.

What is the purpose? What impact will it have on the environment?

For example:

- A bin that cleans the ocean
- An electric robot that picks up rubbish
- Automatic tree planters

Then, create your invention using recycled materials/reusable junk at home. E.g. cardboard boxes, plastic bottles, string, paper, straws etc.

5. Water-saving device
