

Ch 1

Do your working-out using the column method and do not forget to line up the place value digits correctly and your decimal point too. Use paper to work out your answers then type them up under the questions here as a decimal number and show me your answer as a fraction too.

Example Qn1: $3.44 + 9.3 = 12.74$ (as a fraction is 12 and $\frac{74}{100}$)

So I must see your calculated answer and your answer as a fraction.

Addition and Subtraction
of Ones and Hundredths

(K)

1. $3.44 + 9.3 =$
2. $3.86 + 4.32 =$
3. $2.23 + 2.2 =$
4. $8.84 + 1.19 =$
5. $3.89 + 8.81 =$
6. $4.86 + 3.74 =$
7. $2.77 + 6.87 =$
8. $3.76 + 3.38 =$
9. $8.87 - 6.61 =$
10. $3.54 - 2.55 =$
11. $9.53 - 4.89 =$
12. $7.87 - 5.06 =$
13. $5.68 - 3.93 =$
14. $6.22 - 3.32 =$
15. $6.4 - 4.8 =$
