

Ch 3

Do your working-out using the column method and do not forget to line up the place value digits correctly and your decimal point too. Use paper to work out your answers then type them up under the questions here as a decimal number and show me your answer as a fraction and a percentage too.

**Example Qn1:**  $8.51 - 3.55 = 4.96$  (as a fraction is 4 and  $\frac{96}{100}$  and as a percentage is 496%)

So I must see your calculated answer and your answer as a fraction and percentage.

Subtraction of Ones and Hundredths (F)

1.  $8.51 - 3.55 =$
2.  $9.29 - 3.07 =$
3.  $8.39 - 7.89 =$
4.  $8.25 - 7.56 =$
5.  $7.75 - 3.4 =$
6.  $1.97 - 1.24 =$
7.  $9.5 - 5.08 =$
8.  $8.24 - 4.5 =$
9.  $9.86 - 0.92 =$
10.  $7.87 - 1.3 =$
11.  $5.35 - 3.86 =$
12.  $2.01 - 0.31 =$
13.  $7.95 - 5.44 =$
14.  $3.97 - 1.52 =$
15.  $6.56 - 4.3 =$
