

Javan Rhinos

Rhinos can be found in warm countries, as they don't like the cold. They like lots of space to move around and plenty of plants and fruit to eat. There are different kinds of rhinos. They differ in size and some have longer horns.

About Javan Rhinos

- They are smaller than African rhinos, with small horns on their noses.
- They don't like cold or dry places. They like to live where it is damp and there are plenty of plants.
- They sleep during the hottest part of the day and come out when it is cooler.
- Javan rhinos have thick, tough skin which protects them from animals that might want to hurt them.

An Endangered Animal

Sadly, Javan rhinos are being hunted, which means not many are left. We call this being 'endangered'. There used to be thousands of Javan rhinos but now there are only about 60 left in the wild. If people don't stop hunting them, there will be none left in just a few years' time.

Javan Rhinos - Questions

1. Why do rhinos live in warm countries?

2. What do rhinos like to eat?

3. Which is smaller, an African rhino or a Javan rhino?

4. How many Javan rhinos are left in the world?

5. What will happen if Javan rhinos aren't protected?

6. Write one sentence to describe a Javan rhino.
