All about Autumn

Autumn is one of the four seasons; it is the season that comes after summer. Autumn begins in September and finishes in November.

What happens to the animals?

Hedgehogs hibernate through autumn and winter. They collect lots of berries and eat them all before rolling themselves up tightly into a ball and falling asleep.

During autumn, squirrels will go out to collect nuts and acorns. They dig a hole in the ground and store their supply of food.

Geese fly south for the winter to find a warmer place to live, and fly north again for the spring.

What foods are harvested?

During autumn, many foods are harvested. Foods such as pumpkins, carrots, cauliflower, sweetcorn and apples are harvested in the autumn.

What is celebrated in autumn?

On 31st October, many people around the world celebrate Halloween. Children dress up in costumes and pumpkins are carved into silly or scary faces that are lit up with candles.

Bonfire Night is celebrated on 5th November. This is usually celebrated by having a bonfire and watching fireworks with friends and family.

Shooting for the Stars

Our Planet

Planet Earth is one of eight planets in our solar system. Earth spins (very slowly) around. It takes one day for the Earth to spin around once.

Nearly three-quarters of the Earth is covered in water. In the oceans, seas, rivers and lakes, there are lots of different plants and animals.

The rest of the Earth is covered in land. Many parts of the land are inhabited (lived on) by people, although there are still some areas where nobody lives.

Our Solar System

The planets in our solar system all travel around the Sun. Earth is the fourth closest planet to the Sun. The planet nearest to the Sun is Mercury, which is very hot. The planet furthest from the Sun is Neptune, the coldest planet in the solar system.

The Moon

The Moon travels around the Earth. In 1969, Neil Armstrong and Buzz Aldrin travelled to the Moon on a rocket called Apollo 11. When they landed on the Moon, they planted a flag.

Did You Know?

Scientists are still trying to work out if there is any water on the surface of the Moon. If there is, then one day plants could grow and people may even be able to visit!
