

Week 1: Science experiment

This week for Science we would like you to do an experiment at home! Some of you may be familiar with this experiment from last year. We would like you to observe what happens to the egg shell when left in a certain liquid!

Remember the enamel on our teeth is closest matched to the shell of an egg

So what happens to our teeth if left in a fizzy drink, water or milk? WE SHALL FIND OUT :)

You need to leave an egg in a cup/container with each liquid and **OBSERVE** the daily change. Write up an observation of changes from day 1 all the way to day 5!

What you need:

- 3 eggs
- 3 containers/cups
- Fizzy drink
- Water
- Milk

And a pen and paper!!! Simple isn't it?

Once you've written up the observation, turn it in via google classroom or even upload a picture of the activity done at home.

Due date: **Friday 5th June 2020**
